QA Automation Engineer with 2+ years of enterprise IT experience at Capgemini and a proven, portfolio-backed track record building production-grade QA workflows: Playwright/POM UI automation, Postman/Swagger API testing, and SQL-driven data validation. Combines strong Agile delivery leadership (Certified ScrumMaster) with a public technical writing platform reaching 10,000+ readers. Seeking a fully remote QA Automation Engineer / Manual QA Tester role.

Core Competencies

- **Manual QA Testing:** Functional, regression, and exploratory testing; test case design; defect tracking (Jira)
- **API Testing:** Postman, Swagger, request/response and schema validation
- **UI Automation:** Playwright with the Page Object Model (POM) design pattern
- **Data Validation:** SQL queries for backend/database test verification
- **Tools & Practices:** Git/GitHub, Jenkins (CI/CD concepts), JavaScript, TypeScript, Agile/Scrum, Kanban

Professional Experience

- **Senior Infrastructure Analyst** *Capgemini* 2019–2022
 - Led root-cause diagnosis and resolution of technical issues across an enterprise IT environment, building the defect-investigation rigor now applied to QA work
 - Drove Agile/Scrum delivery as a Certified ScrumMaster, owning sprint planning, backlog management, and Kanban-based workflow optimization
 - Partnered with cross-functional engineering teams to strengthen system reliability and support processes

Projects

- **Amazon QA Portfolio** github.com/harekarsakshi/amazon-qa-portfolio
 - Architected an end-to-end e-commerce QA suite: manual test case design, Playwright UI automation (POM), defect reporting, and SQL-based backend data validation against an Amazon-style shopping flow
- **Northfield Luxe Test Plan** github.com/Pranit-Harekar/Northfield-Luxe
 - Authored a full manual test plan against an open-source e-commerce sandbox, covering accounts, catalog, cart, checkout, orders, refunds, coupons, and admin management across customer/admin roles
 - Built an AI-assisted QA Workflow Orchestrator (GitHub Copilot agent skill) that automates manual testing end-to-end: extracts requirements from a Jira ticket, drafts a test plan, generates test cases in Zephyr, executes them via browser automation, and updates Jira with results
- **HealthChart API Testing** github.com/harekarsakshi/healthchart-api-testing
 - Designed and executed 48 Postman test cases against a healthcare REST API (auth, RBAC, appointments), logging 5 defects with severity ratings across status-code, schema, and business-rule validation
- **Playwright Project** github.com/harekarsakshi/playwright-basic-project
 - Automated login and cart workflows on SauceDemo using reusable page classes under the Page Object Model, with assertion-driven checks across the checkout flow
- **QA SQL Project** github.com/harekarsakshi/qa-sql-project
 - Wrote SQL validation queries (JOINS, GROUP BY, HAVING) against a simulated e-commerce schema to surface data-integrity bugs missed by UI-level testing

Education

- *B.E. in Electronics* 2015–2019

Technical Writing & Community

- **Zero to QA in 30 Days** (zero-to-qa.vercel.app): authors a public daily-article series taking readers from QA fundamentals through advanced automation (manual testing, Playwright, TypeScript, CI/CD), cross-posted to Substack, LinkedIn, and GitHub; one Playwright-focused post surpassed 10,000 views

Certifications

- Certified ScrumMaster (CSM) ▪ Certified Kanban Expert ▪ Google Project Management Certificate
